

Revolutionary Arch Blade Scissors

order in 5s per colour

Scissors for every use
By using all parts of the blade from end to edge, the newly developed STRESS-FREE ARCH BLADES easily cut materials that conventional scissors find it difficult!

Stress-free
Stress-Free arch blades cut approximately X 4 than conventional blades.

Hybrid-arch blades for stress-free cutting
This scissor has special pat pending arch-shaped blades that provide the lightest cutting experience. Perfect for cutting paper or cardboard, it can even be used for cutting things like leather belts, extremely thin plastic, and plants.

Air cushion handles for comfort
The handle uses flexible plastic with air pockets that act as cushions. This disperses the stress on hands, decreasing stress on hands by 40% compared to our conventional products. (Kokuyo measurement)

Non-stick blades
Blades are made with slightly angled edges so that the blades have minimum contact with the material being cut. Keeps adhesives from building up on the blades, even after cutting duct tape.
